Kyle Shevlin (https://kyleshevlin.com)

Staff Software Engineer

Staff software engineer with ~15 years of web and mobile experience, specializing in building polished, accessible UIs, frontend architecture, design systems, and large-scale migrations. Expert in TypeScript, React, and Vue. I set technical direction, mentor engineers, and care deeply about product quality.

Strengths

- Frontend architecture and design systems across web and mobile
- Large-scale migrations: codemods, lint enforcement, and incremental rollout
- Mentoring and teaching through workshops, courses, and conference talks
- Strong eye for product and UX improvements
- Creator, maintainer, and contributor to several open source projects
- Experienced with agentic development workflows (Claude Code, Cursor), using AI agents for large-scale refactors and migrations while maintaining a high bar for code review and quality

Work

Propel, Inc - Staff Software Engineer | March 2025 - October 2026

- Led frontend modernization of a large Nx/Vue monorepo serving 6M+ users
    - Migrated the full stack from Vue 2 to Vue 3, a notoriously difficult upgrade
    - Rebuilt the testing harness, moving from Jest to Vitest
    - Wrote codemods to automate the migration, using Claude Code and Cursor to generate and validate them across the monorepo
- Led adoption of Tailwind CSS across the stack, replacing homegrown utilities and SCSS
    - Built custom lint rules to block new usage of the legacy system
- Shipped dozens of usability and accessibility improvements to the design system
- Extended the CMS to support the migrations
    - CMS authors Vue components directly, so improved CMS search for component-migration support
    - Built a bulk find-and-replace tool for migrating content
- Built A/B tests for campaigns including Summer EBT and AEP 2026 open enrollment

Skills: JavaScript, TypeScript, Vue, Nx, Monorepos, Tailwind CSS, Vitest, Codemods, Design Systems, Claude Code, Cursor

---

Agathist - Founder and Lead Engineer | January 2024 - March 2025

- Led technical architecture and implementation across client projects, spanning React Native mobile apps, Next.js web apps, and Astro marketing sites
- Managed sub-contractors and client engineers to deliver on client goals

Skills: JavaScript, TypeScript, React, React Native, GraphQL, PostgreSQL, Astro, Node, Next.js, Tailwind CSS, Nativewind, Design Systems, Monorepos, Expo, Codegen, Cursor

---

Virta Health - Senior Software Engineer | March 2022 - March 2024

- Led frontend architecture across the organization, building a unified design system for web and mobile
- Architected a type-safe design token system in TypeScript that enforced visual consistency and accessibility, eliminating UI defects from incorrect style usage
- Built analytics tooling to track legacy design system usage, driving migration priorities and progress tracking
- Led migration from a tightly coupled legacy design system to a modern component library, improving developer velocity and maintainability
- Designed and delivered bi-weekly workshops on React composition patterns, decoupling, and frontend architecture
- Mentored teams through the shift from API-coupled UI components to a clean separation of data and presentation

Skills: JavaScript, TypeScript, React, React Native, GraphQL, PostgreSQL, Node, Design Systems, Monorepos

---

Kyle Shevlin LLC - Frontend Software Engineering Consultant | June 2021 - March 2022

- Built a custom course platform (courses.kyleshevlin.com) with integrated payments and content delivery
- Developed and delivered React workshops on advanced hooks patterns and modern React architecture
- Provided technical leadership and architecture consulting for multiple client engineering teams

Skills: JavaScript, TypeScript, React, Next.js, d3

Murmur - Principal Software Engineer | March 2021 - June 2021

- Architected and built core pieces of the product's user workflow
- Partnered with the founder and designers on initial UX and the MVP

Skills: JavaScript, TypeScript, React, Node, GraphQL, Next.js, MongoDB, Codegen

---

Webflow - Senior Software Engineer | January 2019 - February 2021

- Led development of highly requested CMS features used by thousands of customers
- Built testing infrastructure that enabled large-scale refactors with confidence
- Mentored multiple junior engineers to promotion
- Worked across the CMS, Asset Management, and Growth teams, ramping up quickly and contributing on each

Skills: JavaScript, Flow, React, MongoDB, Node

Formidable Labs - Senior Software Engineer | March 2018 - August 2018

- Built features for a React/MobX/Electron app used by high-volume photographers, and contributed

to a shared React UI component kit

Skills: JavaScript, React, MobX, Electron

Fastly - Senior Software Engineer | August 2017 - February 2018

- Built d3 usage graphs for the Image Optimization service and new UIs for load-balancing features
- Migrated components into a shared package used by all Fastly applications

Skills: JavaScript, Ember, d3

Second Story Interactive Studios - Front End JavaScript Developer | September 2016 - August 2017

- Architected and solely built a multi-user touch table interactive for Holland America using React, Redux, and WebSockets
- Built Second Story's brand site from the ground up with server-side rendering

Skills: JavaScript, React, Redux, WebSockets

FINE - Front End Web Developer | November 2013 - July 2016

- Built maintainable CSS/SCSS architectures for 80+ websites, and was the sole full-stack developer on several projects
- Created Componentize, a Ruby gem for building Rails components from partials, shortening project timelines
- Established frontend standards that improved consistency and onboarding; promoted from junior to mid-level developer

Skills: CSS, SCSS, jQuery, JavaScript, Ruby on Rails

Other Accomplishments

- egghead.io instructor, with courses on state machines and XState (https://egghead.io/courses/introduction-to-state-machines-using-xstate), functional programming (https://egghead.io/courses/just-enough-functional-programming-in-javascript), and data structures and algorithms (https://egghead.io/courses/data-structures-and-algorithms-in-javascript)
- Conference speaker (https://www.youtube.com/watch?v=cyM70d9IpSg&list=PLsKt3e7yWv_gdGW0IFvo7Iy9Qn5qDkGYV)
- Writer at kyleshevlin.com (https://kyleshevlin.com)

Noteworthy Repos

- eslint-plugin-use-encapsulation (https://github.com/kyleshevlin/eslint-plugin-use-encapsulation): An ESLint plugin that forces you to follow the useEncapsulation pattern I developed and describe here: https://kyleshevlin.com/use-encapsulation (https://kyleshevlin.com/use-encapsulation)
- use-debugger-hooks (https://github.com/kyleshevlin/use-debugger-hooks): A set of custom React hooks that help you find and debug excessive renders and other hook related issues

Education

- **MA** - Fuller Theological Seminary - Pasadena, CA - 2012
- **BA** - Lenoir-Rhyne University - Hickory, NC - 2007
